THE  
Chapmans and Travellers  
ALMANACK  
For the Year of CHRIST  
1693.

Wherein all the Post-Roads, with their several Branches and Distances, the *Marts, Fairs, and Markets* in *England and Wales*, are *Alphabetically* disposed in every Month; so that the *Place where*; and the *Day on which* any of them are *kept*, is immediately found out.

To which is added

A TABLE OF ACCOUNTS,  
Ready Cast up, For the *Buying and Selling* of any *Commodity*, by *Number, Weight, or Measure*; from *One Farthing* to *Ten Pounds*: and of any *Quantity*, from *One* to *Ten thousand*.

With a *SUN-DIAL*, and other *Tables* and *Things*, useful for all *Travellers, Traders, or Chapmen* whatsoever.

ALSO,

The *Rising and Setting* of the *Sun and Moon*, the *Tides*, and whatsoever else is necessary for an Annual  
ALMANACK.

LONDON Printed by Tho. James for the  
Company of STATIONERS 1693.

Days of the Moons Age Increasing, from the Change to the Full.

Days of the Moons Age Decaying, from the Full to the Change.

The Moon comes to South in the morning.

The Moon shines in the Morning.

**I**N the Fifth Column of this *Almanack*, you have the Age of the Moon standing against every day in the Years by help whereof and this little Table, you may nearly find

**I.** At what hour and minute the Moon will be just in the South, either evening or morning.

**II.** How many hours and minutes she will shine, either at night or next morning.

**III.** At what time the Moon riseth or setteth.

**IV.** The hour of the night, by the shadow of the Moon upon any Sun Dial.

**I.** To find at what time the Moon will be due South.

*Example*, Upon the 6 of March, the Moon being then 10 days old, I would know at what time the Moon will be upon the Meridian or South.

Look in the first Column of this Table for 10, the Moons Age increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the Moon will be just South in the even

**II.** To find how long the Moon shineth.

*Example*, Upon the 2 of March, the Moon that day

being 6 days old, I would know how many hours and min. she shineth that night.

4  
Look for 6 (the *Moons* age) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so long will the *Moon* shine that Evening, because the *Moon* increaseth.

III. To find at what time the *Moon* Riseth and Setteth.

1. If the *Moon* be increasing, that is, if she be less than 15 days old, *adde* the hours and minutes of her *shining*, to the hours and minutes of the the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But,

2. If the *Moon* be decreasing, that is, if she be above 15 days old, *subtract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainder will be the time of the *Moons Rising*.

*Example*, Upon the 3 of *March*, the *Moon* is 7 days old, and the time of her shining is 5 hours 36 min. which added to 6 hours 18 min. the time of the *Suns Rising* that day, the *Sun* will be 11 hours 54 min. at which time, that day, the *Moon* will rise—But upon the 20 of *March*, the *Moon* being 24 days old, the time of her shining is 7 hours 12 min. which subtracted from 5 h. 44 m. the *Suns Rising* that day, there will remain 6 h. 56 m. or 11 in the morning, for the time of her *Rising*.

For the *Moons Setting*.

1. If the *Moon* be less than 15 days old, *adde* the time of her *shining* to the time of the *Suns setting*, the sum is her *setting* — But

2. If the *Moon* be above 15 days old, *subtract* her *shining* from the *Suns setting*, the remainder is her *setting*, adding or subtracting 12 hours if need be: — So upon the 4 of *May* the *Moon* will be found to set at 2 hours 57 min. the next morning; and on the 17 of *May* to set at 1 hour 35 min. the next afternoon.

V. To find the h. of the Night by the *Moons Shadow* on a Sun-Dial.

Find at what time the *Moon* comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12, which take from the time of the *Moons* coming to the South, the remainder is the hour of the night. But if the Shadow be past 12, add those hours to the coming to the South, and the Sum is the hour of the night.

*Example*. Upon the 19 of *April*, the *Moon* being 13 day old, and comes to the South at 20 h. 24 m. and that night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take 2 h. 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the night — But if the Shadow had been 2 h. 30 m. after 12, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the night.

**A Table of Interest for several Sums of Money, at the rate of 6 in the Hundred, for divers Months and Days, Viz.**

## The Uſe of the SUN-DIAL.

For the ready finding of the hour of the Day by this Dial, you muſt provide a ſtreight Staff or Ruler, which muſt firſt be divided into Ten equal parts, and then each of thoſe into ten other ſmaller parts, ſo will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, &c. to 100: And ſo is it fitted for Uſe.

Now, when you would find the hour, you muſt erect your Staff or Ruler perpendicular, that is, ſet it upright upon ſome plain level ground, floor, or table, and note the place where the end of the ſhadow ſhall fall, and with your Staff meaſure the length of the ſhadow in Staves lengths, and hundred parts of the length, according as 'tis numbred.

*Example 1.* Suppose that upon the 16 day of January, I do erect my Staff perpendicular, and meaſuring the length of the ſhadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day at the top of the month of January, I find 3, 0 to ſtand againſt the 16 day, and at the top find XII, which tells me it is then juſt 12 a Clock. — *Example 2.* Suppose that upon the 6 of May I erect my Staff as before, and meaſuring the ſhadow thereof, I find it to be twice the length of the Staff, and 24 parts more, wherefore, I look at the top of the Dial in May, for the 6 day, and caſting my eye along that line, towards the right hand, I find 2, 24, to ſtand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon.

*Example 3.* Upon the 16 of April, I find the length of the ſhadow to be once the Staffs length and 30 parts more; I look in April for the 16 day in the Sun-Dial, and in the line againſt it for 1, 30, and againſt it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 in the morning, or a little after 3 in the afternoon. — *Example 4.* Upon the 26 of June I find the length of the ſhadow of the Staff to be once the whole length, and 20 parts; if I look for this number 1, 20, in the Sun-Dial againſt the 26 of June, I can find no ſuch number, but the neareſt to it leſs in that line is 1, 01, over which ſtands IX, III, and the neareſt number to it, greater, is 1, 38, over which ſtands VIII, IV, ſo that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon.

A little practice will make all this plain: For *Uſus optimus Maſter*.

The Number of Pounds, Yards, Gros, or the like, to be bought or sold.

## The Use of the Table of Accounts.

**T**HIS Table will serve for many good purposes, but it is principally intended for the Chapmans use in Buying and Selling of any Commodity by the Yard, Ell, Pound, Hundre Gallon, &c. And its use is very easie; as by

### EXAMPLE I.

*At 9 d. the Yard, what will 70 yards come to?*

Look for 9 d. at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, under 9 d. you shall find 2 l. 12 s. 6 d. And so much will 70 Yards at 9 d. the Yard come to.

Also, At 5 d. the Gallon, 500 Gallons will come to 10 l. 8s. 4d. And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

### EXAMPLE II.

*At 7 s. the Dozen of Gloves, what will 78 dozen come to?*

	l.	s.
70 Dozen at 7 s. comes to	24	10
8 Dozen at 7 s. comes to	2	16

The Sum 27 06

So that 78 Dozen at 7 s. the Dozen, come to 27 l. 6 s.

### EXAMPLE III.

*At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?*

	l.	s.	d.
300 Ells at 3 s. comes to	45	0	0
300 Ells at 5 d. comes to	6	5	0
300 Ells at 3 q. comes to	0	18	9

The Price of 300 Ells 52 3 9

### EXAMPLE IV.

*At 7 d. halspeny the Pound, what will 92 Pound come to?*

	l.	s.	d.
90 Pound at 7 d. the Pound, comes to	2	12	6
2 Pound at 7 d. the Pound, comes to	0	01	2
90 Pound at a halspeny, comes to	0	03	9
2 Pound at a halspeny, comes to	0	00	1

The Price of 92 Pound, at 7 d. 2 q. 2 17 6
